AVET. Ti:Sapphire Femtosecond Terawatt Amplifier System

- Single-table design
- >15 TW commercial system
- <35 fs pulse duration
- High beam quality
- Excellent beam pointing and power stability
- Motorized vacuum-compatible compressor assembly for 10/15 TW
- Compressor vacuum chamber for 10/15 TW (optional)
- CEP-stabilized system (optional)

Product overview

Our company is proud to offer the pinnacle of our technology, the AVET terawatt-level femtosecond laser system. The system comprises rugged Ti:S seed oscillator, pulse stretcher, CPA-based amplifier stages with Nd:YAG pump lasers, vacuum compressor chamber with turbomolecular and vacuum pumps outlets (for 10 and 15 TW systems), synchronization and control electronics with computer interface. All components are integrated onto a single optical table ensuring stable operation. The additional Pockels cell pulse slicer offers enhanced nanosecond contrast ratio. Moreover, the AVET system may be equipped with a SH and TH generation units. As we also produce full line of diagnostic equipment including SPI-DER, cross-correlator, single-shot and real-time autocorrelators and spectrometers, they may be also added to the system for a single-source supply, being fully compatible and tuned for operation.

Applications of the system feature such fundamental areas as particle acceleration for general physics research and cancer treatment, research of relativistic conditions for fusion and plasma studies, generation of X-ray and attosecond pulses, seeding PW-class amplifier systems, as well as remote measurement of air pollution and lightning control via filament studies.

* - sech^2 fit, measured by the ASF-15 Avesta single-shot autocorrelator.
**AVET System Layout**

**Femtosecond Oscillator**
- TiF series
  - 790 ±15 nm, 75 ± 10 MHz
  - <30 fs, >3 nJ

**Stretcher**
- 200 ps

**Faraday Isolator**

**Regenerative Amplifier**
- >2 mJ

**Slicer**
- OG-B-D (optional)

**Multipass Preamplifier**
- >30 mJ

**Vacuum Compressor**
- <50 fs, >500 mJ, 10 Hz

**Multipass Power Amplifier**
- >850 mJ

**Q-sw Nd:YAG Lasers**
- 532 nm, 10 Hz, 280 mJ

**Q-sw Nd:YAG Laser**
- 532 nm, 10 Hz, 3 J

**Optional diagnostics:**
- AA-20DD Scanning Autocorrelator
- Spectrometer ASP-75
- Third-Order Cross-Correlator COMET-800
- SPIDER-800-10 Spectral Phase Measurement
- Single-Shot Autocorrelator ASF-15
- Spectrometer ASP-75
- AMG-A-800 Harmonic Generator+SFG
  - 400 nm, 266 nm, 200 nm
- Compulse-800 Hollow-Fiber Compressor
  - (500 uJ, <8 fs)
- RS-800 Raman Shifter (~1200 nm)
- SPIDER-800-5 Spectral Phase Measurement
- Single-Shot Autocorrelator ASF-5
- IR Scanning Spectrometer ASP-IR-1.7
- Single-Shot Autocorrelator ASF-15

**Synchronization and Control Unit**

**AVET-10 Suggested Complete System Layout**

**AVET-2 pulse duration measured by the ASF single-shot autocorrelator**

**AVET-10 pulse duration measured by the ASF single-shot autocorrelator**
